

Fail to run setup file. How can I rectify the problem?

Concerning to:

- Kaspersky Internet Security 6.0 MP2 (version 6.0.2.614)**
- Kaspersky Internet Security 7.0**
- Kaspersky Anti-Virus 6.0 for Windows Workstations MP2**
- Kaspersky Anti-Virus 6.0 for Windows Servers MP2**

The problem arises because the standard set of **Windows 98SE/ME/NT/2000** does not include **Windows Installer 2.0** necessary to run the setup file of Kaspersky Anti-Virus version 6.0. To rectify the problem, download and install **Windows Installer** version **2.0** or higher.
